

Application Rates

Twenty (20) lbs. of OCEANGRO™ 5-5-0 is needed to apply one lb. of nitrogen to a lawn of 1,000 sq. ft.

To calculate the square footage of the area to be fertilized, multiply the length by the width. Once the square footage is determined, divide the total square footage by 1,000 sq. ft. and multiply the result by 20 lbs. to determine the amount of OCEANGRO™ required. See examples below.

Total Sq. Ft. ÷ 1,000 Sq. Ft.	Multiply Result in First Column by 20 Lbs.
2,500 sq. ft. ÷ 1,000 sq. ft. = 2.5	2.5 x 20 lbs = 50 lbs. OCEANGRO™
6,000 sq. ft. ÷ 1,000 sq. ft. = 6.0	6.0 x 20 lbs. = 120 lbs. OCEANGRO™
8,600 sq. ft. ÷ 1,000 sq. ft. = 8.6	8.6 x 20 lbs. = 172 lbs. OCEANGRO™
